Glossary

E-Invoicing Procedures

Procedures for Phase 2 of the portal in Egypt.

Goals

E-invoicing aims to reduce the administrative burden and costs associated with manual paper-based processes. Providing Real-Time Reporting and Transparency.

Architecture Principles

High-level of E-Invoicing Architecture

Solution Design

Solution Benefits

Entities in Scope

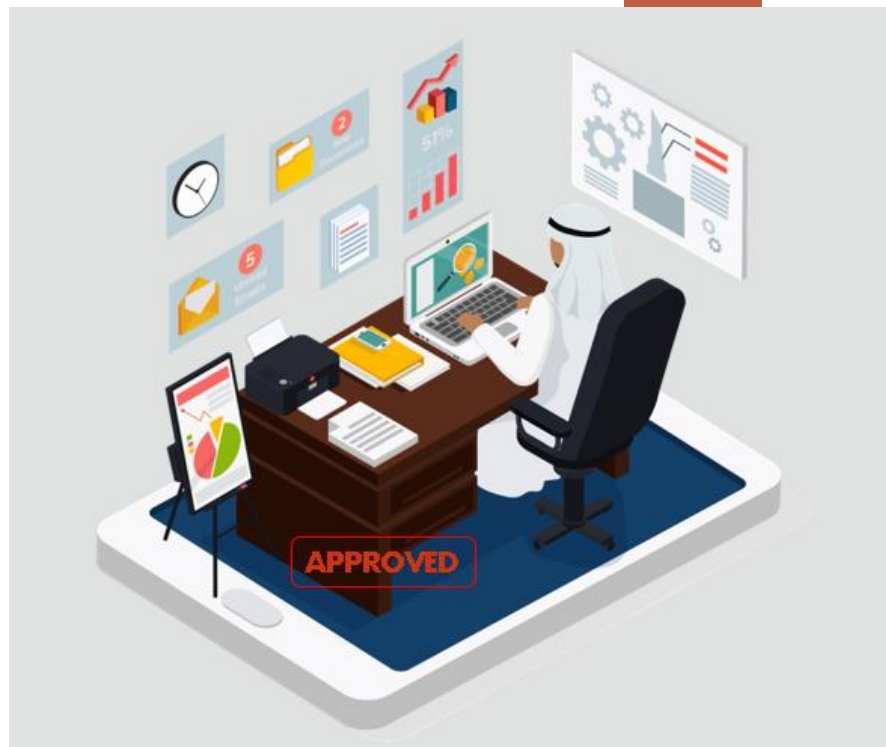

Introduction

This document is designed to illustrate the solution design of E-invoicing Integration Phase-1 between ERP system and portal to follow the Tax authority regulations.

Phase One (Integration Phase):

Integration Phase, where persons subject to the E-Invoicing Regulations must integrate their systems with the Authority 's system in accordance with the clauses set forth under the Resolution on the Controls, Requirements, Technical Specifications and Procedural Rules and any subsequent resolutions. The integration phase will be implemented in phases and will be mandated to Persons subjected to the E-Invoicing Regulations based on a certain set of criteria determined by the Authority. The target groups will be informed of the integration procedures with the authority 's systems at least six months before the date set for integration with the target group or groups. The tax invoices should follow the clearance model whereas the simplified tax invoices should follow the reporting model.

The Atyab ERP system will be configured to generate e-invoices that comply with TAX PORTAL regulations and standards. Once the integration is complete, Atyab Company can benefit from faster, more accurate, and more efficient e-invoicing processes that comply with regulations and requirements.

1. E-Invoicing Procedures

To integrate your invoicing system with TAX PORTAL's platform, you will need to follow the technical integration guidelines provided by TAX PORTAL. Here are some general steps:

- **Register** and obtain access to the API: You must register and obtain access to the API by signing up for the platform and obtaining an API key or credentials.
- **Define** API endpoints: Define the API endpoints in your invoicing system (Oracle EBS) that will allow you to send invoices to 's platform.
- **Map** invoice data to API payload: Map your invoice data to the format specified by the API.
- **Send** the invoice data to platform via API: Send the invoice data to 's platform using the API endpoints. Ensure that you receive the appropriate response codes from the API.
- **Verify** invoice data transmission: Verify that the invoice data is transmitted correctly and ensure that the platform processes the data accurately.
- **Handle** failed transmissions: by providing feedback to the invoicing system (Oracle EBS).
- **Ensure** data security and encryption mechanisms to protect the invoicing data during transmission.

2. Integration Goals

The goals of integrating invoicing system with TAX PORTAL's platform:

Real-Time Transmission

Enable real-time transmission of electronic invoices to the tax authority for regulatory and audit purposes. This has been achieved by establishing a secure and efficient method of transmitting e-invoices to the platform.

Accuracy & Integrity

Ensuring data accuracy and integrity and complying with the technical and regulatory requirements defined by TAX PORTAL.

Integration

The integration process serves to streamline invoicing and reporting processes, reduce the risk of errors, and ensure compliance with the electronic invoicing mandate in Egypt.

Simplifies Invoices

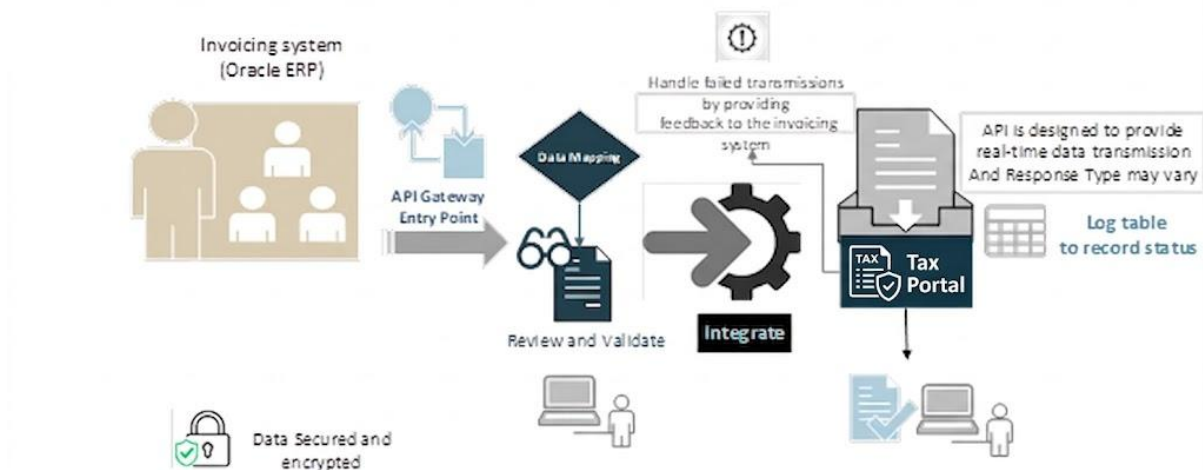

How will the Company generate Simplified Tax Invoice including additional data fields prescribed in E-Invoicing Resolution in an electronic format using a compliant E-Invoice Generation Solution (EGS) which is onboarded and what will be required for the Cryptographic Stamp Business Processes.

3. Architecture Principles

The solution for integrating Oracle ERP as Invoicing System with TAX PORTAL's platform would typically involve the following components illustrated in the following figure:

Integration Process Architecture

The approved formats for all Electronic Invoices and Electronic Notes for Integration shall be XML format as referred to in this Resolution.

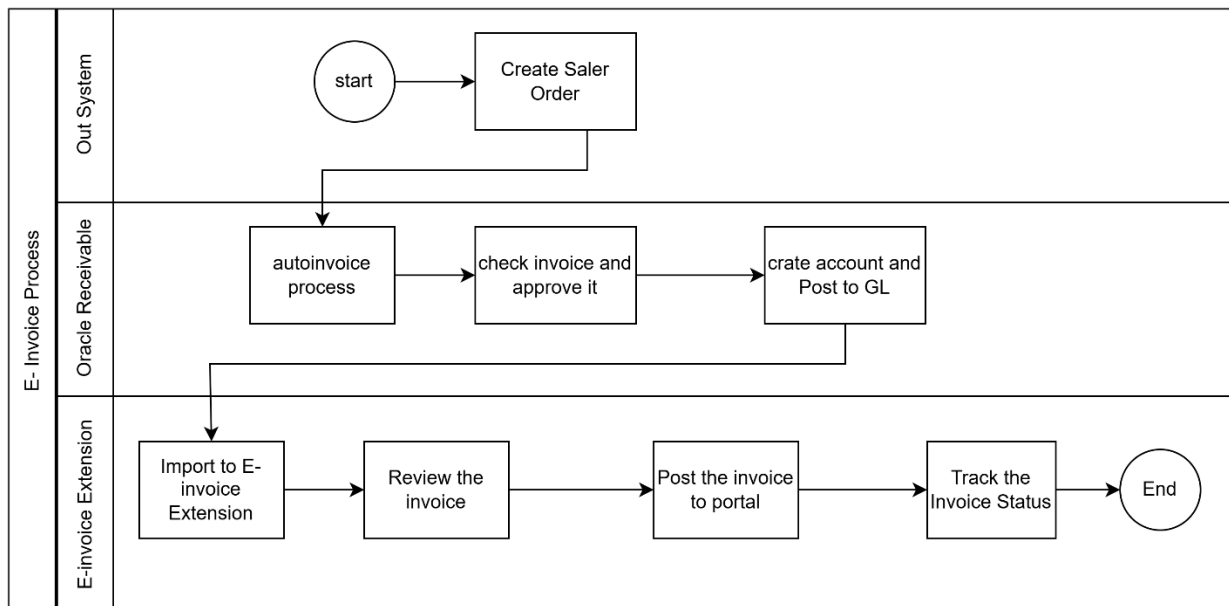

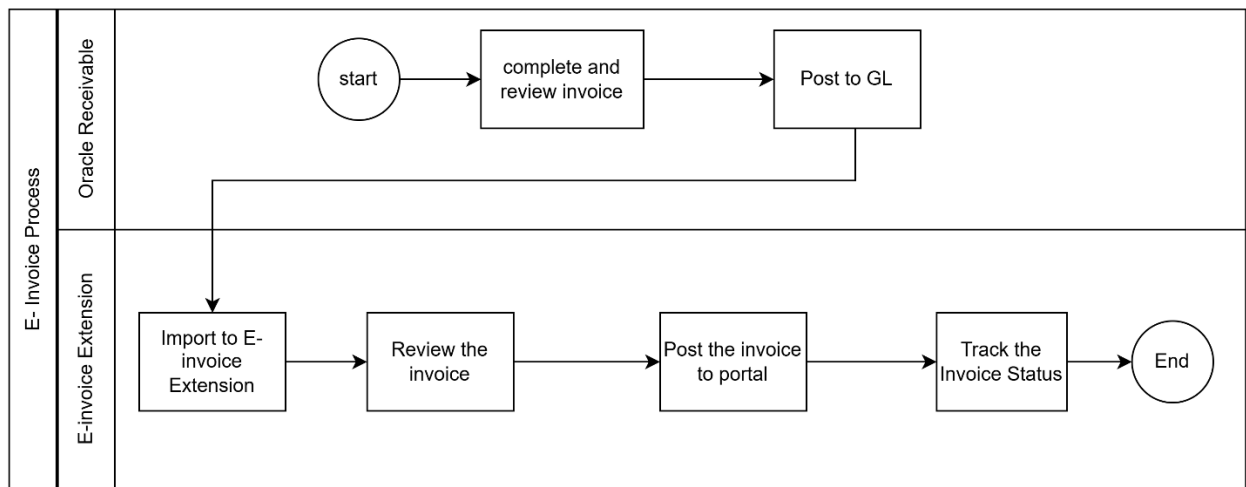

The Compliant E-Invoice solution must be able to connect to an internet connection and integrate with external systems by using Application Programming Interface (API) specified by the Authority and published on its website.

The following requirements details and shall be reviewed and updated periodically by the Authority:

- ✓ Electronic Invoice requirements covering types of invoices, invoice formats and invoice structure.
- ✓ Security and stamps requirements covering cryptographic stamping, hashing, etc.
- ✓ Data and connectivity requirements of the E-Invoice Generation Solutions for Electronic Invoices and Electronic Notes.
- ✓ Prohibited capabilities and functions.

4. E-Invoicing Design

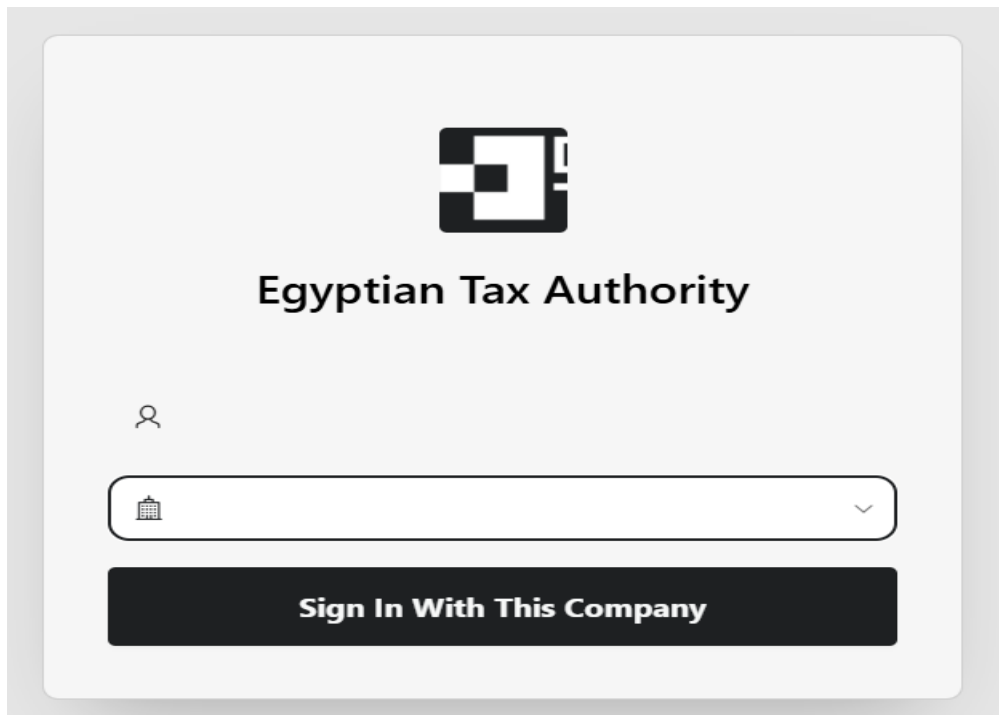

The TAX PORTAL e-invoicing software enables you to issue e-invoices, generation of invoices in a specified format, storage of E-invoice, and anti-tampering features. It also provides seamless integration with the ERP and uploading of invoices at TAX PORTAL, which makes it a perfect e-invoicing solution for phase 2 of TAX PORTAL E-invoicing, that is the integration phase.

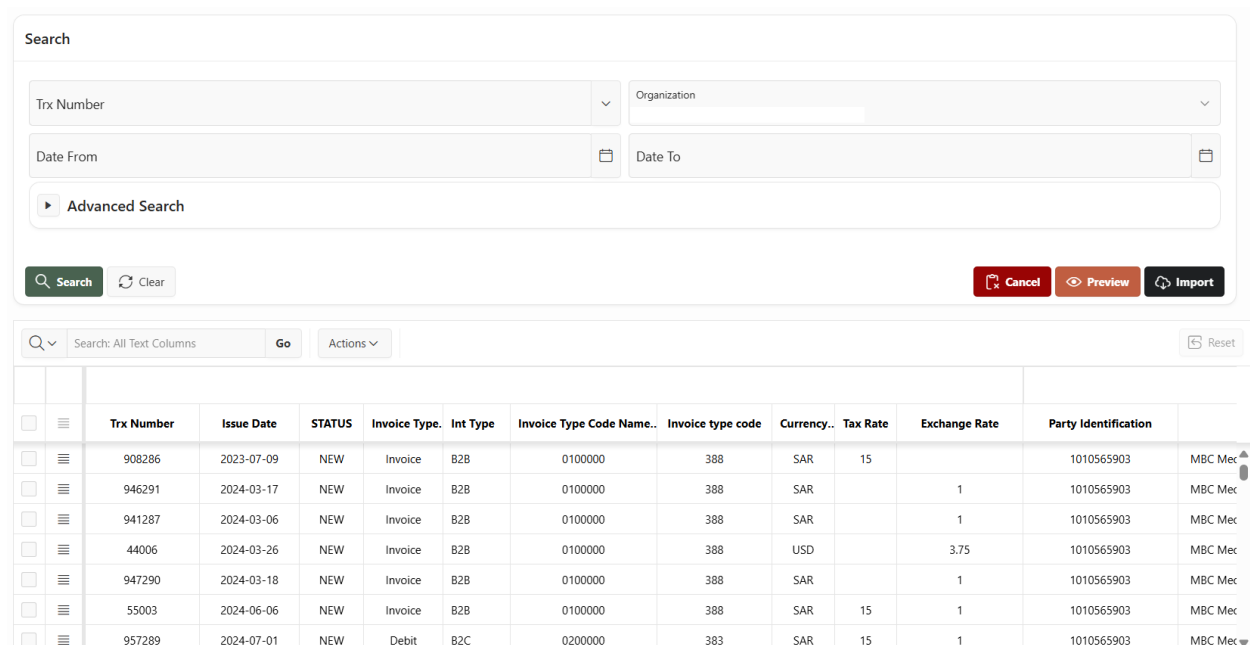

5. E-Invoicing Portal

After create AR transaction then go to Tax Portal e-invoice extension:

then choose company and it show your user name that you enter extension:

after that click sign in you can search from old invoices that you enter before:

	Trx Number	Issue Date	STATUS	Invoice Type	Int Type	Invoice Type Code Name	Invoice type code	Currency	Tax Rate	Exchange Rate	Party Identification

1522	3880466	Invoice	CLEARED	229			
1521	3879465	Invoice	NOT_CLEARED	228			

Last you can click in dashboard to see all status of invoice and percentage of all status

Summary Cards:

- Number Of All Invoice: 376
- Cleared Invoice: 127
- Reported Invoice: 16

Costs:

- TOTAL AMOUNT IN SAR WITH TAX: 1,119,966
- TOTAL AMOUNT IN SAR WITHOUT TAX: 0

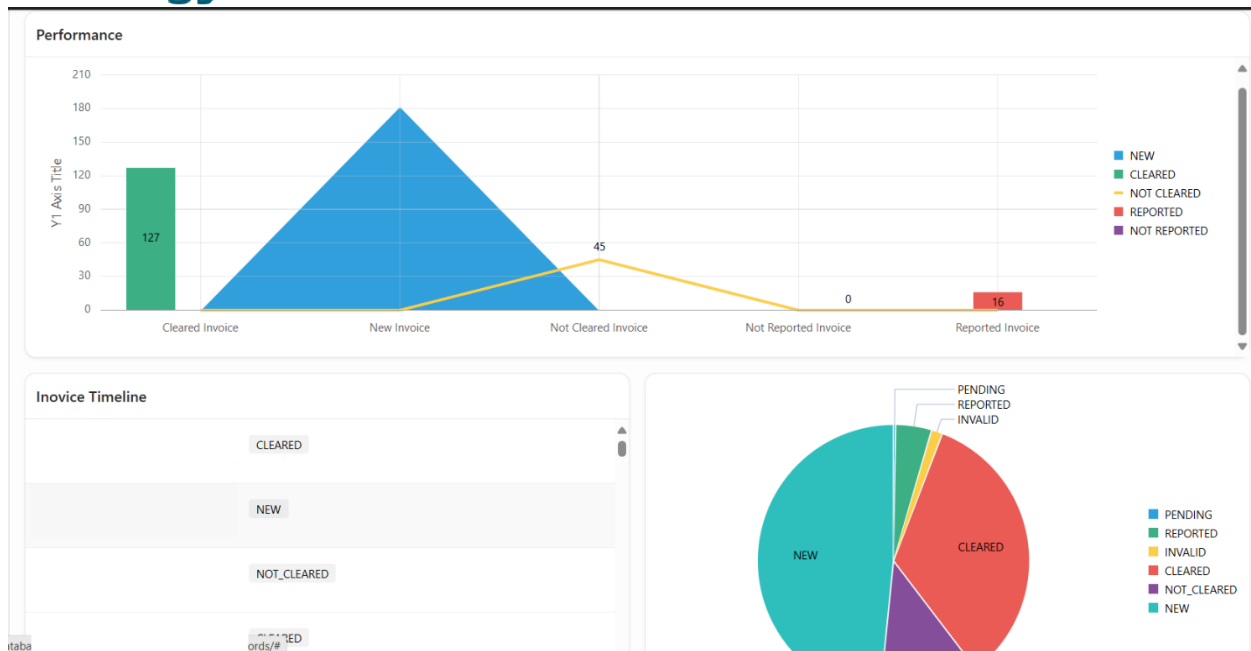

APPLIED:

- TOTAL NOT APPLIED AMOUNT: 1,091,506
- TOTAL APPLIED AMOUNT: 28,460

TOP CUSTOMERS:

Invoice Performance:

Status	Count
PENDING	1
REPORTED	16
INVALID	5
CLEARED	127
NOT_CLEARED	45
NEW	182

In addition to the above, the below points are taken into consideration to be delivered based on the planning and analysis phase in the Integration Project.

- How link between item in ERP and Tax Portal.
- How link between customer in ERP and Tax Portal.
- Transactions that are created at night and need to be sent the next day.
- If the customer does not have a tax registration number or ID, how can the transactions be sent? Because in the tax portal, transactions can be posted without a tax number only if the amount is not greater than 50,000.00

Taxable persons must report the Simplified Tax Invoices to the Authority. Reporting is a near-real time transaction model, where Simplified Tax Invoices and their associated Credit/Debit notes are uploaded to the Portal within 24 hours from issuance. Once uploaded, Simplified Tax Invoices are then validated, and an acknowledgement through the API is reported back to the taxpayer.

Simplified Tax Invoices must be generated using compliant E-Invoice Solutions and stamped by such solutions as set out by the Authority requirements under the Controls, Requirements,

Technical Specifications and Procedural Rules for Implementing the Provisions of the E-Invoicing Regulation and further subsequent resolutions.

The invoicing process also includes:

Issuing the invoice by the seller and subsequent audit, reporting, and approval by TAX PORTAL for compliance.

A supplier/seller issues an invoice to register a sale.

- ✓ An invoice may either be a Tax Invoice or a Simplified Tax invoice.
- ✓ The invoice shall contain the fields and security features specified in this document.
- ✓ The invoice shall be stored by the taxpayer as part of their tax record.

A supplier/seller issues a credit or debit note to correct issued invoices.

- ✓ The note may either be structured like a Tax Invoice or like a Simplified Tax Invoice
- ✓ The note shall refer to one or more issued invoices.
- ✓ The invoice shall be stored by the taxpayer as part of their tax record.

The customer/buyer wishing to use the invoice or associated note for input VAT deduction receives the invoice or associated note.

- ✓ The invoice or associated note is processed for deducting input VAT.
- ✓ The invoice or associated note is stored as part of the taxpayer's tax record.

As for the process of TAX PORTAL, it involves various procedures for TAX collection, tax collection, and customs clearance, and the authority may also carry out audits and inspections to ensure compliance and detect any discrepancies.

6. Benefits of E-Invoicing Solution

Electronic Invoicing has several benefits for both persons subject to E-Invoicing Regulations and national economy, these benefits include:

- A. Reduces cost of invoicing process.
- B. Prevents human error in invoicing process.
- C. Enhances digitalization in supply chain.
- D. Improves accounting and bookkeeping.
- E. Enhances business ecosystem with enriched fair competition and consumer protection through provision of a unified process for validating and auditing invoices.
- F. Reduces hidden economy transactions G. Reduces commercial concealment by increasing requirements related to invoice tracking and data retention.
- H. Enriches the consumer experience and digitizes the consumer- supplier relationship.
- I. Increases compliance with tax obligations through enhanced verification of business transactions.

It is important to note that specific technical and business requirements for electronic invoices and electronic solutions are part of the integration process. Taxpayers should stay updated with the announcements and guidelines provided by TAX PORTAL to ensure compliance with the integration requirements for Phase 1 of e-invoicing.
